

EMAIL MESSAGING PROGRAM WITH BUILT-IN VIDEO AND/OR AUDIO MEDIA RECORDING AND/OR PLAYBACK CAPABILITIES

Abstract of Disclosure

An email messaging program with built in video and/or audio media recording and/or playback capabilities is disclosed. A system includes first and second clients, each having an email messaging program installed thereon. The user of the first client composes a message and records media. In a streaming media embodiment, the first client's messaging program uploads the media to a streaming media server, and sends the message to the user of the second client. In a file attachment embodiment, the messaging program attaches the recorded media to the message, and sends the message to the user of the second client. The second client's messaging program retrieves the message. In the streaming media embodiment, when the user of the second client views the message, the messaging program downloads the media from the streaming media server, and plays back the media. In the file attachment embodiment, the messaging program plays back the media.

Figures

Figure 1: A line graph showing the relationship between the number of people in a household and the number of people in a household. The x-axis is labeled 'Number of people in a household' and ranges from 0 to 10. The y-axis is labeled 'Number of people in a household' and ranges from 0 to 10. The graph shows a positive linear relationship, with the line passing through the origin (0,0) and the point (10,10). The line is labeled 'y = x'.
